## CS 410 Project Progress Report

### Progress made so far:

I have selected a dataset to work with. I spent a good amount of time performing data cleaning, wrangling, and manipulation on the dataset to prepare it for the model implementation. I am currently in the process of writing the code for the model that will do the sentiment analysis.

### Remaining tasks:

I need to finish the model and then also write the code for the training and validation. I will also need to figure out how I am going to be presenting everything, as in if I am going to create some basic UI so that a user can interact with the program.

### Challenges/Issues being faced:

A challenge I faced was the data cleaning part. It was fairly tedious and a good challenge and learning experience. A challenge I will likely face is creating the basic UI since I don't know what I will do exactly for that and it's not something that I am too comfortable with.
